

Nicholas Simpson

Teacher

Ice breaker

Picture a school with a remarkable software that can automate your workload, from teaching to assessing to even building stronger habits.

What are some features you would want this software to have?

You have 5 minutes. Write as many as you can.

Today, in order

1. Ice breaker	2. Opening video	3. Presentation	4. Live demo	5. Questions
----------------	------------------	-----------------	--------------	--------------

Your questions

Write a question the moment you think of it.

Ask as we go

During the video and the presentation

Ask after the live demo

Things you saw, things you could not find, things you would change

Smart Assess

ALREADY BUILT

Measure learning. Set tests and exams, sit them securely, mark them, and understand the results.

Build tests and exams	Multiple choice, true/false, short answer, fill in the blank and essay, with images, audio and subject tools, such as an equation toolbar for maths. Save questions in a bank and reuse them. Turn a PDF into questions, or let the AI draft questions from a topic. You review every one.
School exams across a department	A team lead drafts a standardised exam, heads of department vet it, and it is published to the right classes.
Secure sitting	Tab switches are logged, pasting is blocked, and a desktop app can lock the screen to the exam. Answers are saved if the connection drops.
Marking that saves time	Multiple choice and short answers are marked the moment a student submits. Essays get a marking page with marking points, and an optional AI suggestion you always edit before saving.
Results that tell you what to do	Release results when you are ready. See which questions the class missed, the most common wrong answer, and which students may need support. Students see their own results by topic.
Reports and analytics	Report cards, pass rates by subject and department, and a dashboard of flagged exam sessions.

What this means for you, Mr. Simpson

Less time making questions, marking and adding up marks. You decide every mark; the software does the routine work.

Smart Learning

ALREADY BUILT

Teach and recover learning. Lessons, study support, catch-up and reading. It acts on what Smart Assess finds.

Lessons in the national 5E model	Build a lesson (Engage, Explore, Explain, Elaborate, Evaluate), assign it to a class, and watch each student's progress. Short check questions come at three levels: support, core and stretch.
Lesson plans	An AI button drafts a full plan from a subject, grade and topic for you to review. Teachers across schools can share and copy published plans.
Catch-up for absent students	Record the day a lesson was taught. Students who were absent are offered it, and you see who has caught up.
Coverage	A grid of which classes have been taught which topics, so gaps show early.
Student study support	Flashcards with review spacing, an optional AI tutor the school controls, and a Library of books to read or listen to.
Current and future	What is happening now and what is coming: what is due, what needs attention and which students may need support. Teachers can also share resources with their department.

What this means for you, Mr. Simpson

Plan faster, and know which students missed a lesson and which topics need another go. Share what works with your department.

Smart Play

BUILT AND TESTED. COMING SOON

Make practice engaging. Quick classroom games and challenges. It never holds a school's official results.

Topic Mastery	A student practises one topic at a time and watches their mastery grow.
Math Duels	Two students race through maths questions, without needing to be online at the same moment.
Live quiz and Jeopardy-style boards	Run a quiz on the projector with students answering on their own devices, or a board of categories and points for teams.
Tug of War	Two teams pull a rope by answering quick questions, and every student appears on the field.
Rewards	Points, day streaks, badges and class leaderboards keep practice going.
Questions	Build your own game questions or import many from a spreadsheet.

What this means for you, Mr. Simpson

A fun way to start or end a lesson that also practises the topic you are teaching.

Sign in

Website

mhs.smartassessja.com

1

Open the website

On your phone or laptop, go to the address above and choose Sign in.

2

Choose who you are

Next to "I am a", choose Teacher. Under "Sign in to", choose Smart Assess.

3

Enter your details

Email: your school email address (the facilitator will confirm it on the day).

Password: **Staff.Default1**

4

Set your own password

The first time, the site asks you to set a new password. Use at least 8 characters, and write it somewhere safe.

5

Set up two-factor sign-in

All staff accounts need an authenticator app. Install Google Authenticator, Microsoft Authenticator or Authy on your phone before the session if you can. Scan the code on screen with the app, then type the 6-digit number it shows.

6

Every time after that

You sign in with your email and password, then type the 6-digit code from the app.

Demo data only. Everything on this site today is practice data. Please do not enter real student information. Stuck? Say what you are trying to do and the facilitator will help.
