

SMART ASSESS JA

Smarter Assessments. Better Learning.

A connected assessment, learning and practice ecosystem
built around how a school actually works.

Built for Manchester High School

Today: the strategy, then the experience

PART 1

The strategy

- The problem and the vision
- Why Smart Assess
- What the three products do
- How we compare with other tools
- What this means for Mathematics

PART 2

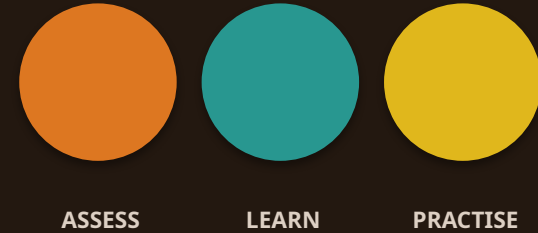

Hands-on session

- Experience it as a teacher
- Experience it as a student
- See what leadership can see
- Explore the platform yourself
- Tell us what would make it better

By the end, I want one question answered: would this make your workload easier and improve learning for students?

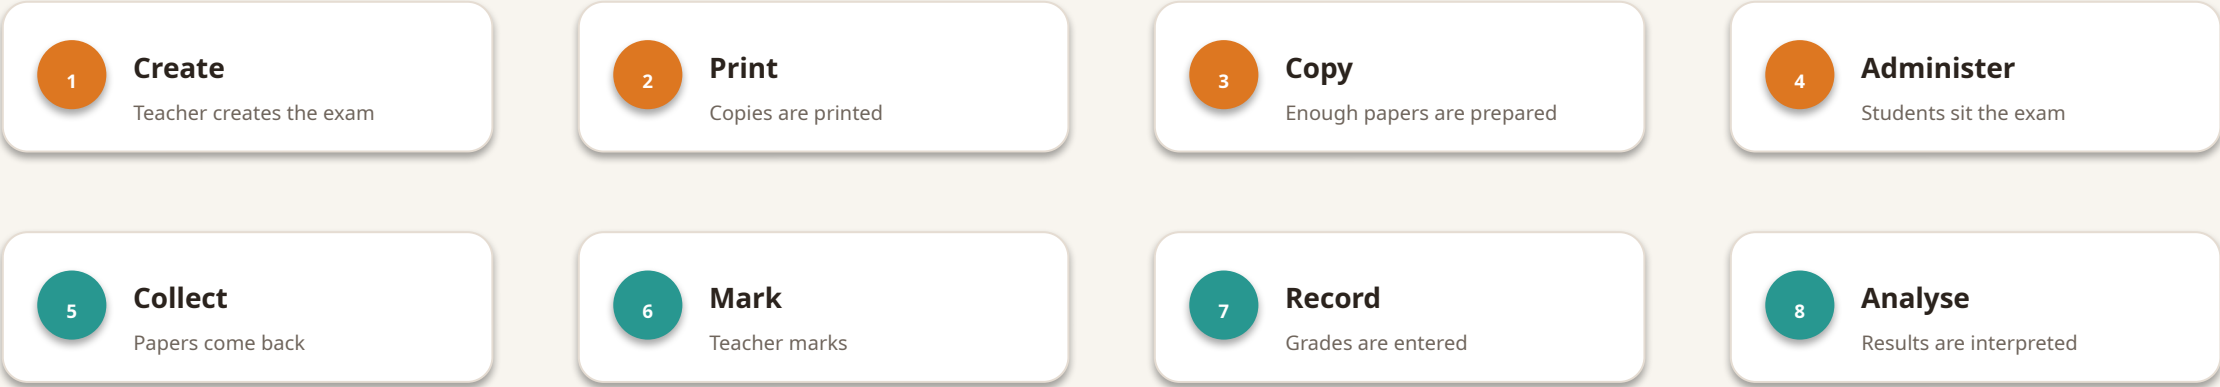

What if school technology actually reduced your workload?

Not another platform that creates more work. A platform that removes steps from the work you already do.

Every term, learning travels onto paper, and back again

The assessment itself may take one hour. The work around it can take much longer.

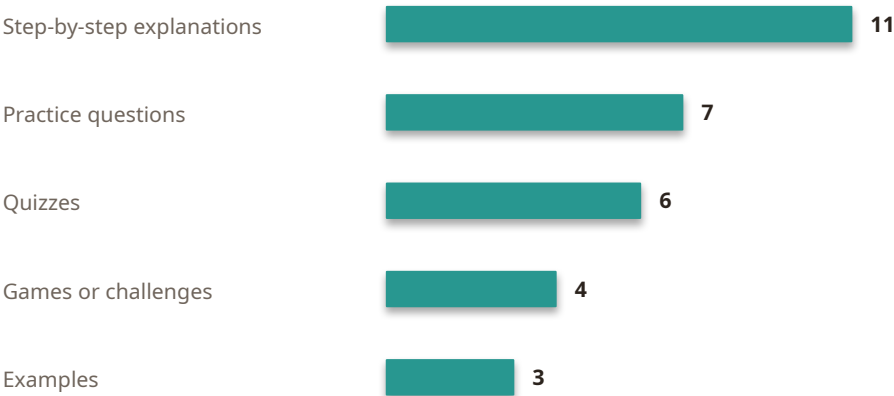

Time. Cost. Paper. Administration. Repetition.

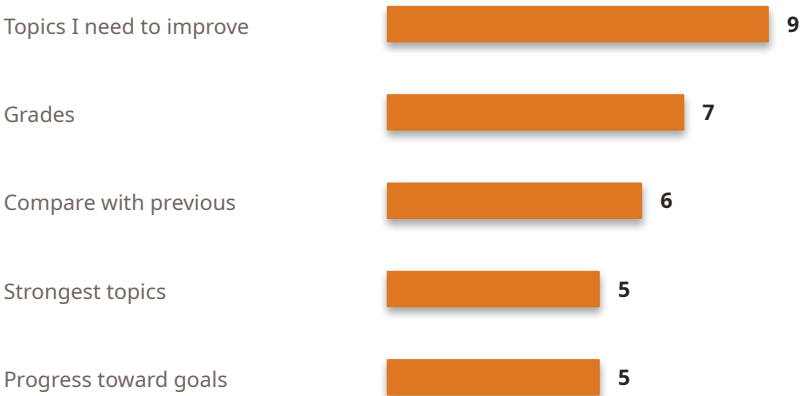

What 12 Manchester students told us

A small sample, but useful enough to show us what students say would make learning easier.

What would help you learn a difficult topic?

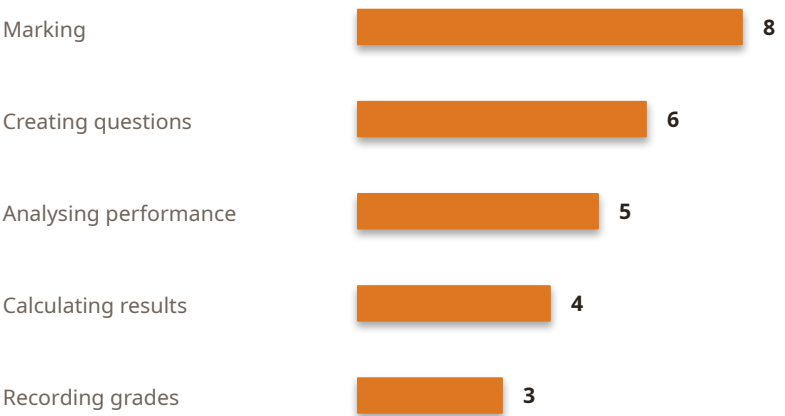

What would you want to see about your progress?

10 of 12 said studying for exams is one of the areas where technology could make school life easier.

What 10 Manchester teachers told us

Which parts of assessment take the most time or effort?

THREE SIGNALS

- 9 of 10 want the system to show what a student missed
- 9 of 10 want support for different ability levels
- 8 of 10 want AI-assisted lesson planning

The common thread: less manual work, clearer information and better support for students.

Technology finally organized around how a school actually works.

That is the idea behind Smart Assess JA.

One school. One set of people. One shared topic structure. Three products with different jobs.

Three products. One ecosystem.

1

SMART ASSESS

Measure learning.

Set, sit, mark and understand tests, exams and results.

IN USE

2

SMART LEARNING

Deliver and recover learning.

Lessons, lesson plans, study support and catch-up.

SWITCHED ON

3

SMART PLAY

Engage and reinforce learning.

Quick classroom practice, games, duels and rewards.

COMING SOON

Smart Assess: every assessment, one secure record

For assessment only: set it, sit it, mark it and understand the results.

Exam, tests and tasks

Pop quizzes, class tests, homework, assignments and formal exams.

Question bank

Save a question once, tag it to a topic and reuse it.

Maths tools

Write equations and symbols, with an optional scientific calculator.

PDF import + AI polish

Turn an exam PDF into editable questions and improve wording.

Secure sitting

One device, tab-switch logging, blocked pasting and saved answers.

Marking + results

Automatic marking for objective items, teacher review and controlled release.

Exam insight

See missed questions, common wrong answers and students who may need help.

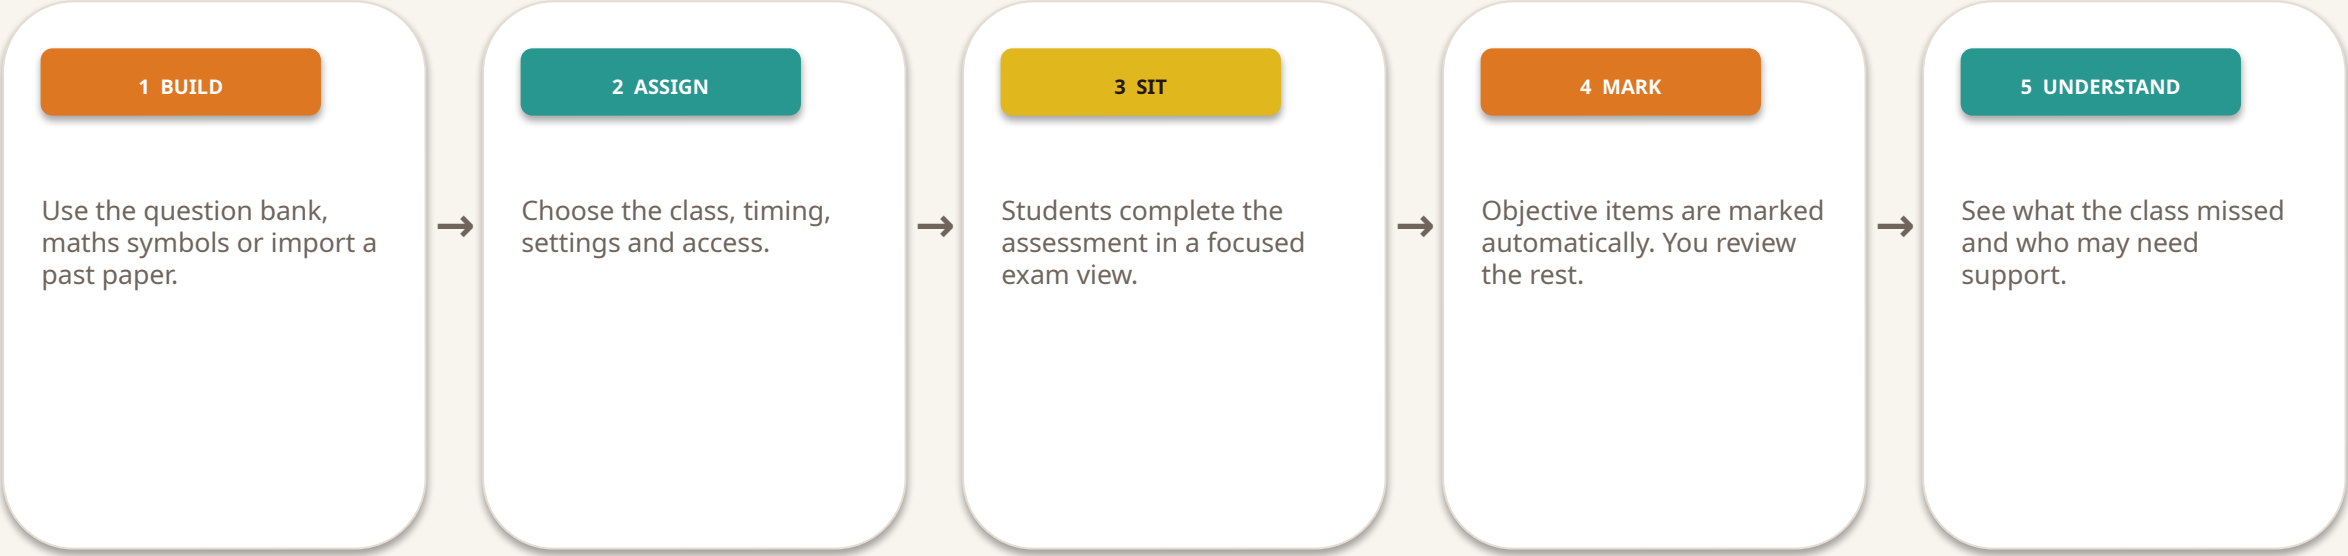

Department analytics

See subject and department pass rates over time.

A Mathematics test, from idea to insight

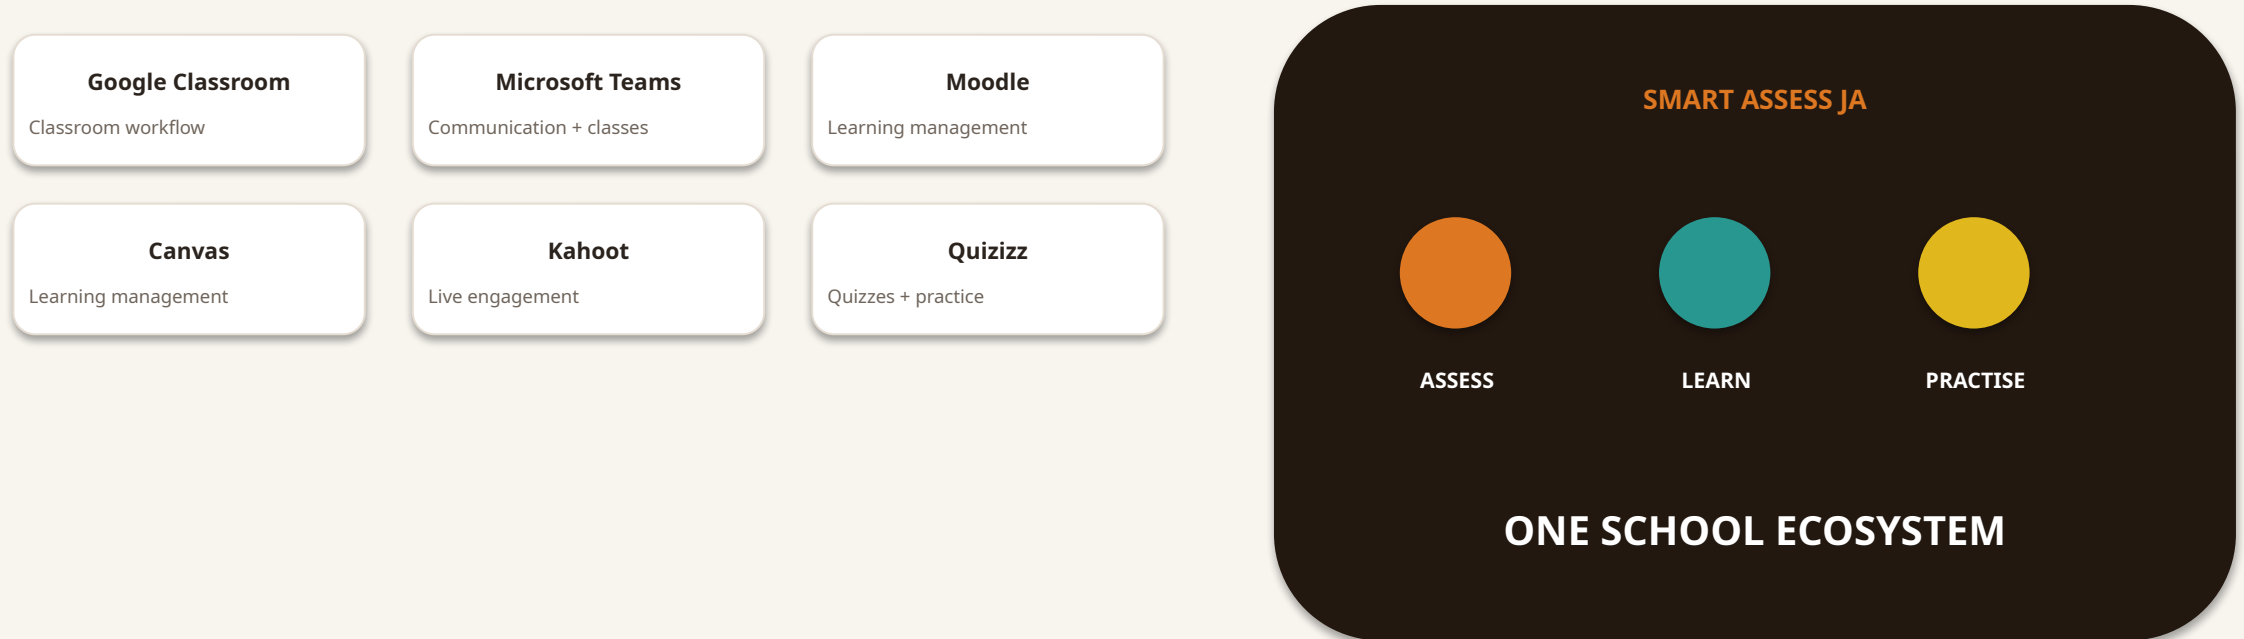

Imagine preparing a Grade 9 algebra test. The workflow can stay inside one system from the first question to the final analysis.

The goal is not to digitize the old process. It is to remove steps from it.

Smart Assess vs the tools schools already know

These tools do certain things well. Smart Assess is different because assessment, learning and practice are connected in one school ecosystem.

The question is not “Can another tool do one of these things?” It is “How many separate tools and handoffs does the school need?”

What Smart Assess is not

Not a teacher replacement

Teachers remain in control of questions, marking and decisions.

Not just a PDF on a screen

It supports the workflow before, during and after an assessment.

Not AI making final decisions

AI can assist with drafting and review. A person decides.

Not three disconnected apps

The products share the school, people and topic structure.

Smart Learning: deliver and recover learning

Assessment tells you what happened. Learning helps you act on what you found.

1

Engage

Lessons

Students work through 5E lessons at their own pace.

2

Explore

3

Explain

Check understanding

Short questions show what students understood.

4

Elaborate

Catch-up

Absent students can be offered the lesson they missed.

5

Evaluate

Coverage grid

See which topics have been taught and where gaps remain.

Lesson plans

Create full 5E plans with optional AI drafting.

Shared plans

Browse and copy published lesson plans from other teachers.

When a student misses three days

Missing class should not mean losing the learning completely.

1

Mon to Wed

The teacher records when each lesson was taught.

2

The lesson is waiting

The absent student can see the catch-up lesson.

3

A path back in

Lesson, notes and practice can sit in one place.

4

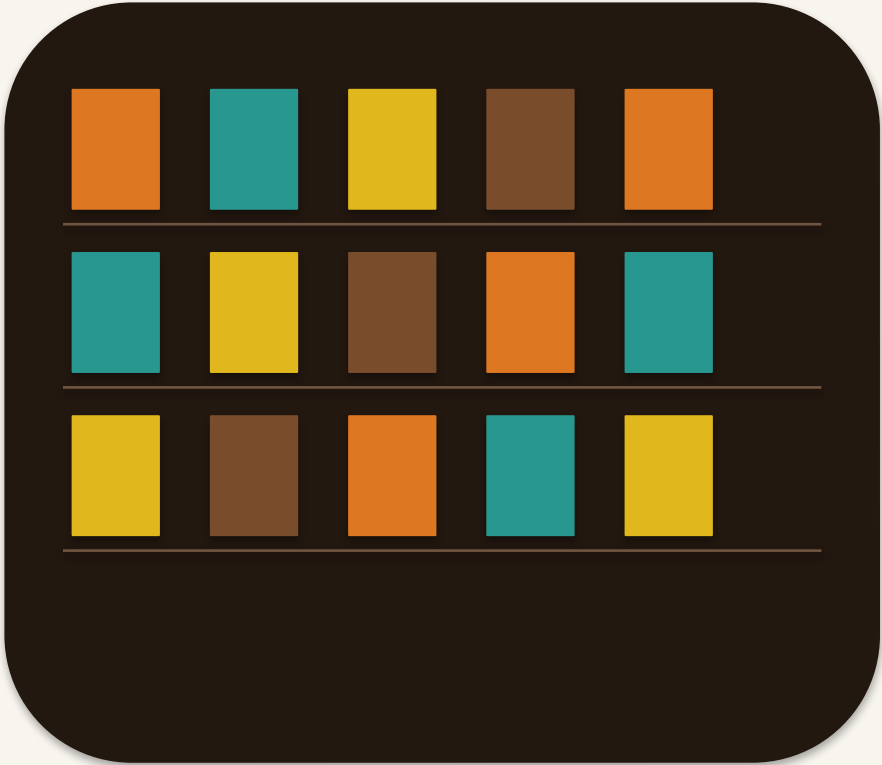

The teacher can see it

The teacher can see who has caught up.

Designed so missing class does not mean missing the learning.

The Library: read it, listen to it, assign it

Books for the curriculum and books for the joy of reading, in the same place as the lessons.

1

Read or listen

Page-by-page reading and audio that remembers where the student stopped.

2

Two shelves

Curriculum reading and reading for fun.

3

Teacher assignments

Assign a book or chapter with a due date and see who finished.

4

Bookmarks and notes

Students can keep private bookmarks and notes.

5

School controls

Choose shelves, year groups, audio and visible titles.

Smart Play: engage and reinforce learning

Quick, fun practice for the classroom. It does not replace formal assessment and it never holds official results.

Topic Mastery

Practice one topic at a time and watch mastery grow.

Math Duels

Two students race through Mathematics questions.

Live Quiz

Host a quiz while students answer on their own devices.

Jeopardy

Categories, points and buzz-in play for students or teams.

Tug of War

Two teams move the rope by answering quick questions.

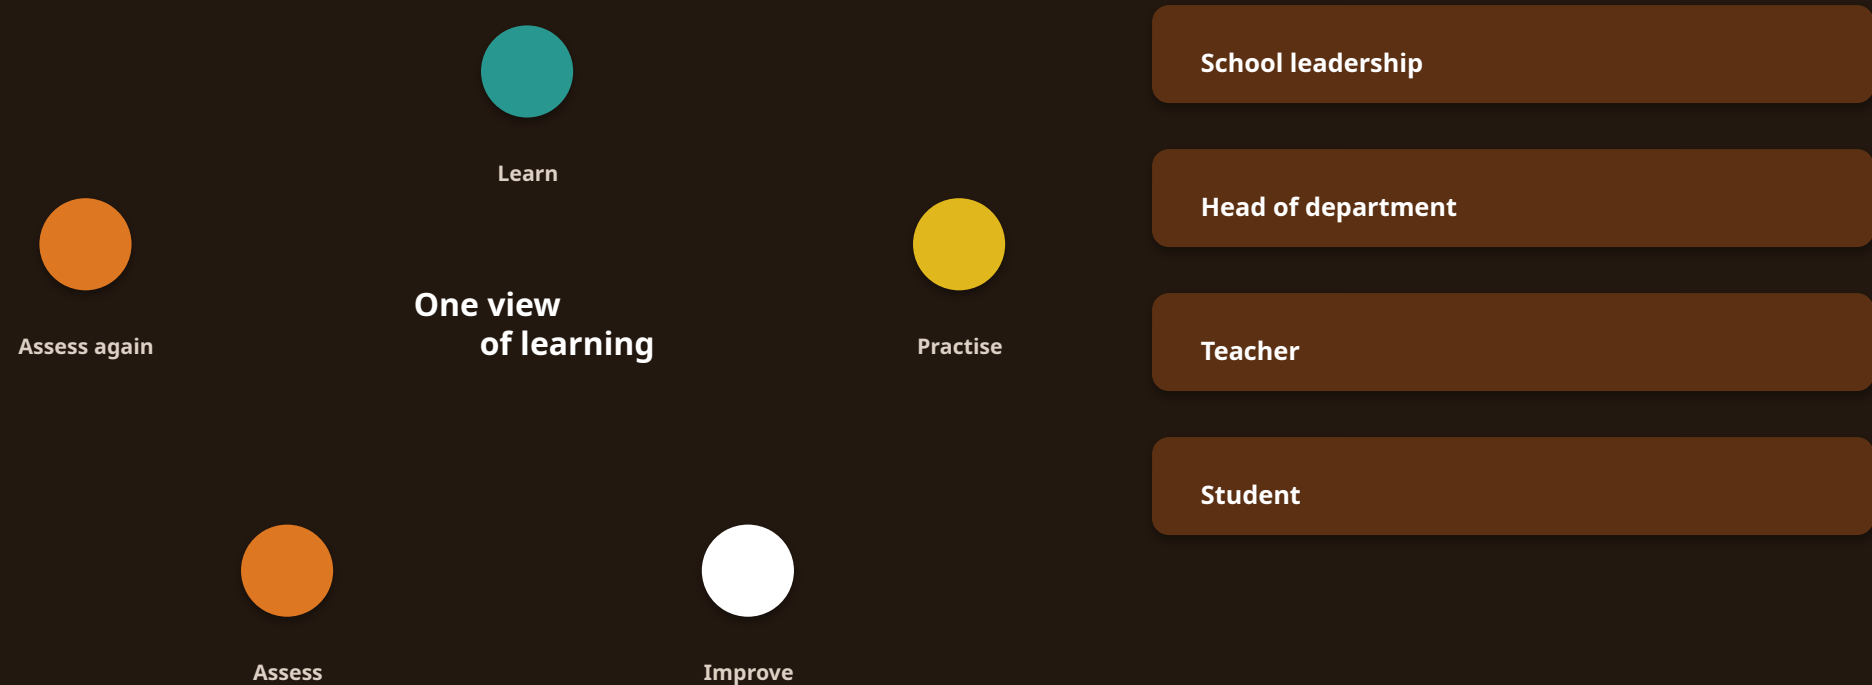

Rewards

XP, streaks, badges and class leaderboards.

Assess, learn, practise, improve, assess again

The three products have different jobs, but they can share the same school, people and topics.

Built around the roles already inside your school

**Student**
Takes assigned work, views results and catches up.

**Teacher**
Creates and assigns assessments, marks, plans and teaches.

**Head of department**
Reviews department exams and sees department performance.

**Principal / admin**
Sees school-wide attendance, people and oversight.

Useful school tools

**Attendance**

**Timetable**

**Teacher absence and cover**

**Staff messaging**

**Classes and enrolment**

**Help assistant**

What could this mean for the Mathematics Department?

Less admin

Fewer repeated steps around assessment.

Faster feedback

Students and teachers get useful information sooner.

Clearer gaps

See the questions and topics that need attention.

Better catch-up

Give absent students a structured path back in.

More practice

Use different ways to reinforce Mathematics.

Shared visibility

Teachers, HODs and leadership can see the level they need.

The goal is not more technology. The goal is to make the work easier and make the learning stronger.

A pathway we can shape together

1

Experience

Use Smart Assess in a real Mathematics workflow.

2

Choose a start

Pick the first class, topic or assessment.

3

Pilot

Use it for a defined period and gather feedback.

4

Review

Look at what worked and what needs to change.

5

Expand

Decide how and where to widen the use.

How we would measure success

Teacher time saved • Ease of use • Student participation • Quality of feedback • Learning gaps identified sooner

YOU'VE SEEN IT. NOW EXPERIENCE IT.

Teacher. Student. Leadership.
